SUMMARY

Business before data. Data analyst with a background in International Business and hands-on experience in Business Intelligence, automation and KPI monitoring. Proficient in SQL, Power BI and Excel/VBA, I combine analytical skills with business sense to turn operational problems into solutions that support decisions and deliver measurable results. A generalist with a systems view, I connect data, processes and departments to spot opportunities and solve business problems.

EXPERIENCE

Business Data Analyst · Paraná State Department of Planning (Brazil) *Feb 2023 – Present*

Data analyst in sectoral planning units, first at the Department of Planning (SEPL), later at the Department of Infrastructure and Logistics (SEIL).

- Redesigned the data flow for monitoring **~250 municipal agreements covering R$ 690 million in public works**. Standardized data entry and built SQL and Power Query transformations feeding Power BI dashboards. The solution removed manual preparation steps, raised the update frequency from monthly to weekly and gave managers clear visibility into project status.
- Built in **2 hours**, with Power BI and Power Query, an executive version of the dashboard tracking **~R$ 250 million in public works funded by the privatization of Copel** (state utility), starting from an existing prototype. Working directly with the director, I redesigned the visuals and added the information required for accountability to the State Audit Court, such as beneficiary municipalities and planned vs. transferred amounts. The director used it in his first public interview about the dashboard, which stayed in use after my transfer to another department.
- Developed **20+ dashboards** for managers and administrative areas, including HR, Procurement and outsourced-services management, tailoring each solution to the area and turning operational data into information for monitoring and decision-making.
- Standardized spreadsheet templates and automated Excel controls for areas with low analytical maturity, improving data organization and making the data usable for analysis and monitoring.
- As part of a team, analyzed **~100 indicators of the Brazilian State Competitiveness Ranking (CLP)** and presented diagnostics to the responsible departments, helping identify improvement opportunities in the state's indicators.

Production Control & Logistics Trainee · Faurecia *Jun 2022 – Feb 2023*

- Developed **three Excel/VBA automations** for freight validation, correction of entries returned by Controllership and source-record updates, integrating the review process with SAP. Cut processing time from a full day to **~3 hours** and helped reduce, within five months, a **R$ 1.5 million backlog to just 9 pending freight documents (CT-e)**.
- Took over container allocation and built a load-optimization tool that kept **utilization above 86%**, beating the 80% operational target.
- Managed international freight with China and France for multiple plants, coordinating transportation and international logistics activities.

EDUCATION

Bachelor's Degree in International Business · ESIC Business & Marketing School · 2020–2023

- **Aster Research Award (2024)** for undergraduate thesis on AI-supported OKRs for performance management.

SKILLS

SQL · Power BI (DAX, Power Query) · Advanced Excel (VBA) · Data Modeling · ETL · Data Visualization · SAP

CERTIFICATIONS

CS50 SQL · Harvard/edX (2024) | Power BI Complete Course · Maven Analytics (130h, 2024) | Power BI Masterclass (72h, 2022) | Excel · Maven Analytics (2021–2022)
