SUMMARY

Data analyst with a background in International Business, focused on turning data into executive dashboards that support practical decisions. I built 20+ Power BI dashboards for Paraná state government managers, using SQL and Power Query to process public data and messy sources. An early adopter of AI tools (LLMs, synthetic voice and image generation), I taught an AI course for public servants in 2023 and, in 2024, received the Aster Research Award for my thesis on developing competencies and people through AI-supported OKRs.

EXPERIENCE

Business Data Analyst · Paraná State Department of Planning (Brazil) *Feb 2023 – Jun 2026*

Data analyst in sectoral planning units, first at the Department of Planning (SEPL), later at the Department of Infrastructure and Logistics (SEIL).

- Redesigned the data flow for monitoring ~**250 municipal agreements covering R$ 690 million in public works**. Standardized data entry and built SQL and Power Query transformations feeding Power BI dashboards, moving the refresh from **monthly to weekly** and giving managers better visibility into the progress of each process.
- Built in **2 hours**, with Power BI and Power Query, the executive version of the dashboard tracking ~**R$ 250 million in public works funded by the privatization of Copel** (state utility), starting from an existing prototype. Working directly with the director, I added the information required for accountability reporting to the State Audit Court. The director used the dashboard in his first public interview on the topic, and it is still being updated.
- Built the extraction of contracts from SIDER (DER-PR) through its API, since the system only exported contract by contract, and standardized the data in SQL into a **single monitoring table**. The same flow was reused at the Municipal Development Department.
- Extracted the posts of SEIL's institutional Instagram account, processed the data in SQL and presented a Power BI dashboard that **quantified the weight of the Guaratuba Bridge** as a communications asset, something the team sensed but could not measure.
- As part of a team, analyzed in depth ~**100 indicators of the Brazilian State Competitiveness Ranking (CLP)** and presented diagnostics to the responsible departments. Wrote the VBA that automated the extraction and consolidation of the indicators: about 4 hours of development versus a week of manual work.
- Created and taught the in-person course **"Artificial Intelligence and Its Applications"** for public servants (16h, in partnership with SEPL, Nov 2023), fully booked. Content: prompt engineering, Code Interpreter, prototyping and ethics.
- Built **20+ dashboards** for managers and administrative areas such as HR, Procurement and outsourced-services management, always starting from the decision each area needed to make.

Production Control & Logistics Trainee · Faurecia *Jun 2022 – Feb 2023*

- Developed **three Excel/VBA automations** for freight validation, correction of entries returned by Controllership and source-record updates, integrating the review process with SAP. Processing time dropped from a full day to **about 3 hours**, and the **R$ 1.5 million** backlog fell to **9 pending CT-es** within five months.
- Took over container allocation and built a load-optimization tool that kept **utilization above 86%**, beating the 80% operational target.

EDUCATION

Bachelor's Degree in International Business · ESIC Business & Marketing School · 2020–2023

- **Aster Research Award (2024)** for undergraduate thesis on **AI-supported OKRs**.

SKILLS

Power BI (DAX, Power Query) · SQL · Advanced Excel (VBA) · Data Modeling · ETL · Data Visualization · Generative AI (LLMs) and Prompt Engineering · Python (in progress) · SAP

CERTIFICATIONS

CS50 SQL · Harvard/edX (2024) | Power BI Complete Course · Maven Analytics (130h, 2024) | Power BI Masterclass (72h, 2022) | Excel · Maven Analytics (2021–2022)

LANGUAGES

Portuguese (Native) · English (C1) · Spanish (B2) · French (B1)
