SUMMARY

Business before data. Data analyst with a background in International Business, working as the data focal point for directors and business areas in the Paraná State Government (Brazil). My work starts in the conversation with whoever makes the decision: I understand the question, pick the indicators that answer it and see the delivery through to real use. Advanced Excel and Power BI day to day, SQL for data preparation and analysis. My edge is consultative communication: I translate business needs into analytical requirements, and technical results into recommendations leaders can act on.

EXPERIENCE

Business Data Analyst · Paraná State Department of Planning (Brazil) *Feb 2023 – present*

Data analyst in sectoral planning units, first at the Department of Planning (SEPL), later at Infrastructure and Logistics (SEIL), as the area's only analyst.

- Built in **2 hours** the executive version of the dashboard tracking **~R$ 250 million in public works** funded by the privatization of Copel (state utility), a task the team had estimated at 5 days. I led the alignment with the director to define the indicators required for accountability to the State Audit Court, such as beneficiary municipalities and planned vs. transferred amounts, reconciled to the cent. The director used it in his first public interview on the topic, and it stayed in use after my transfer.
- Restructured the monitoring of **~250 municipal agreements (R$ 690 million in public works)**. I cleaned the technical team's spreadsheets in Power Query to feed Power BI, then negotiated with the data owner the adoption of a standard template at the source, which removed the manual rework. Updates went from **monthly to weekly** and became the base of the director's report to the Secretary.
- Working with the DER-PR (state roads agency) Planning team, structured a **data pipeline** to integrate and standardize works-contract data from **SIDER**. I automated extraction via the **API**, organized the raw data and built **SQL** transformations to consolidate records and validate missing fields, delivering a structured base for Power BI.
- On my own initiative, scraped the SEIL institutional Instagram posts, validated and cleaned the extracted CSV data in **SQL** and presented a Power BI dashboard to Communications. The analysis put a number on the weight of the **Guaratuba Bridge** in engagement, something the team sensed but could not measure, and the topic gained prominence in the communication strategy that followed.
- Served as the data focal point for three departments plus Procurement and HR, with **20+ dashboards** tailored to each manager's decisions.
- As part of a team, analyzed **~100 indicators of the Brazilian State Competitiveness Ranking (CLP)** and presented diagnostics to the responsible departments, supporting improvement priorities.

Production Control & Logistics Trainee · Faurecia *Jun 2022 – Feb 2023*

- Developed **three Excel/VBA automations** integrated with SAP for freight validation and correction of entries returned by Controllership. Processing dropped from a full day to **~3 hours** and a **R$ 1.5 million** backlog was reduced to 9 pending freight documents (CT-e) in five months.
- With the time freed up, took over container allocation and built a load-optimization tool that kept **utilization above 86%**, beating the 80% target. Also coordinated international freight with China and France.

EDUCATION

Bachelor's in International Business · ESIC Business & Marketing School · 2020–2023

- **Aster Research Award (2024)** for an undergraduate thesis on AI-supported OKRs for performance management.
- **Exchange in Limerick, Ireland (2018–2019):** went from beginner to advanced English in seven months.

SKILLS

Business: Consultative communication with stakeholders and directors · Data storytelling · Translating business needs into analytical requirements · End-to-end project ownership

Technical: SQL · ETL and API integration · Advanced Excel (VBA) · Power BI (DAX, Power Query) · Data modeling · SAP

Languages: Portuguese (native) · English (C1) · Spanish (B2) · French (B1)

CERTIFICATIONS

CS50 SQL · Harvard/edX (2024) | Power BI Complete Course · Maven Analytics (130h, 2024) | Power BI Masterclass (72h, 2022) | Excel · Maven Analytics (2021–2022)
